

I learn by building, so my ideas don't stay ideas — they become working tools. My favorite material is LLMs: I take what these models can do and wrap it in solid backend engineering until it's something people can actually use.

EXPERIENCE

- Mercor — AI Training & Evaluation (Contract)

Remote

Apr 2026 – Present

 - Design adversarial prompts and evaluation tasks that expose where frontier LLMs fail on specific reasoning steps and edge cases.
 - Create verified golden answers and single-answer rubrics that make each model failure reproducible and objectively scorable.
- Dekamond — Software Developer

Tehran · Hybrid

2025 · 6 months

 - Built multi-provider LLM workflows (LangGraph + RAG) behind FastAPI for BI tooling and internal developer tools at Kaleri.ai.
 - Cut LLM running costs ~70% through model routing, caching, and prompt optimization.
- Arnikup — Django Developer (Backend)

Remote · incl. 2-month internship

2024 · 6 months

 - Built REST APIs for a food-delivery platform (DRF + PostgreSQL); offloaded async order processing to Celery/Redis and containerized services with Docker.

SELECTED PROJECTS

- ScrapeGPT — AI-assisted web data extraction

FastAPI · React/TypeScript · SQLAlchemy · LiteLLM · Playwright

GitHub ↗

A self-hosted scraper that turns any website into structured data without writing brittle selector code. The core idea: an LLM proposes the selectors and the app **self-heals** them against the live page, so extraction keeps working when sites change and ordinary scrapers break.
- Aigram — Installable AI messenger for Telegram

Python · Telethon · FastAPI · PWA

GitHub ↗

A self-hosted AI messenger that adds a co-pilot — summarize, translate, image, voice — inside your own Telegram account, keeping your data and API keys private. Ships as an **installable PWA**, engineered for resilience: a multi-provider LLM layer that auto-rotates keys to survive rate limits and outages.
- RubricEval — Rubric-driven code-evaluation platform

Next.js · FastAPI · SQLAlchemy · LiteLLM

GitHub ↗

An automated code-review platform built to make LLM evaluation trustworthy and reproducible. The key decision: the model only grades each rubric criterion with evidence, while a **deterministic policy in code** makes the final accept / review / reject call — keeping verdicts consistent and auditable.

TECHNICAL SKILLS

Languages	Python, TypeScript, SQL
Backend	FastAPI, Django/DRF, Celery, SQLAlchemy/Alembic, REST API design
AI / LLM	RAG, LangGraph, LiteLLM, prompt engineering, LLM evaluation
Data & DevOps	PostgreSQL, Redis, Docker, Linux, Git, pytest, CI (GitHub Actions)

EDUCATION

- M.Sc., Software Engineering — Islamic Azad University, Science & Research Branch

Tehran

2025 – present
- B.Sc., Computer Science — University of Guilan

Rasht · Undergraduate research: Particle Swarm Optimization

2020 – 2024

AWARDS & LANGUAGES

- Award

2nd place, team Python programming competition, University of Guilan (2023)
- Languages

English — professional working proficiency · Persian — native speaker
